

Useful Bash

Curator: Taavi Kivisik

This repository is for promoting quickly useful Bash. It started from a need to prepare some notes for the first Bash workshop I gave.

Content

- [Useful Bash One-Liners](#) - Best for beginners to start benefiting from Bash immediately.
- [Initialize Workspace for Practice](#) - Run this Bash script to create folders and files which you can use to test out commands learned in [Useful Bash Oneliners](#).
- [Useful Bash for the System](#) - Basic Bash for beginners for working with the system.
- [Bash Scripting](#) - Introduction to scripting in Bash and explains some of the basics of the language. What's the difference between a single quote and a double quote etc.
- [Scripting Examples](#) - Basic examples of Bash scripts.

Reading .md Files

Files with an 'md' extension are regular plain text files following a predefined structure. You can read them

- locally as is when opening them with any text editor (e.g. Notepad)
- locally in a nicely formatted way by opening them with an viewer/editor capable of interpreting Markdown (Google for Markdown viewer *<your operating system name>*)
- online in a nicely formatted way at <https://github.com/tkivisik/useful-bash>
